II. LIST OF POLITICAL ENTITIES OF THE WORLD

The accompanying list of political entities of the world has been compiled as an aid in the preparation of maps. The term "political entity" as used here designates any unit which in common cartographic practice is indicated by a country name or is separated from surrounding units by an international or intercolonial boundary. The entities are arranged alphabetically by continent with two exceptions: Australia, together with many Pacific island groups, is included under the term "Southwest Pacific"; and the USSR is listed separately from Europe and Asia. This list differs somewhat from other lists prepared by US Government agencies for such special purposes as the determination of immigration quota areas or the marking of imported goods by country of origin. It is believed, however, that the present list complies with current official policies with respect to the preparation of maps. The entities are classified into five general types, as regards political status, as follows:

1. Independent states.

Each entity that is sovereign or independent in greater or less degree is preceded by an asterisk. Members of the (British) Commonwealth of Nations that are fully self-governing are so indicated, as are associated states of the French Union. Mongolia (Outer

RESTRICTED

RESTRICTED

Mongolia) is also included in this category, although its name is not preceded by an asterisk. Seventy-nine entities are listed as independent.

2. States under military occupation.

Austria, Germany, and Japan are in this category. The names of the occupying nations follow each entity.

3. States having special treaty relations with some larger state.

Some entities have a status approximating independence but are bound to another state by treaties or other arrangements of long standing. In some cases the relationship is similar to that of a protectorate, although it may not be so termed officially. The term "special treaty relations," as used here, refers principally to arrangements that restrict the state in the formulation and conduct of its foreign policy. Arrangements regarding economic unions, economic assistance, or the performance of routine governmental functions are not regarded as special treaty relations. The satellites of the USSR are not included. The list includes a total of 15 states having special treaty relations.¹

1. Each of the sheikhdoms of Trucial Oman is counted as a separate entity.

RESTRICTED

RESTRICTED

4. Territories under interim administration.

The former Italian colony of Eritrea, the Free Territory of Trieste, and certain outlying Japanese islands, grouped together as one entity, are included in this category. Three political entities fall within this type.

5. Dependencies.

All other entities are dependencies of one or more states or are governed under international agreements. Such dependencies are colonies, protectorates, protected states, territories, condominiums, international zones, trust territories, and mandated territories. The status of each dependency usually is given after its name, followed by the name of the mother country or, for a trust territory, the name of the administering nation. The terms used to indicate status are those applied by the governing country. No attempt is made to define these terms, because in practice the definitions vary between entities. Antarctica and its adjacent islands are omitted, since the United States does not recognize any Antarctic claims. The list includes 103 dependencies.

The information on political status is included because it is of possible general interest and assistance to map compilers. In most cases it is not necessary or desirable to include on a map all of the information given. On general maps it is not customary to distinguish among types 1, 3, and 4. Neither are the colonies, protectorates, territories, or other dependencies of type 5 usually

RESTRICTED

RESTRICTED

designated as such. If the political status of a dependency is to be designated, it is usually sufficient to give the name of the mother country in parentheses beneath or beside the entity name. The trust territories differ from most of the others, however, in that they are not under the sovereignty of the administering states. It is therefore desirable to designate a trust territory by a notation in parentheses beneath or beside the territory name, such as (Trust Territory--United Kingdom). Occupation zones for the states of type 2 may be shown or omitted according to the purpose of the map.

1. The US Government has not recognized the incorporation of Estonia, Latvia, and Lithuania into the USSR and does not necessarily recognize some of the boundaries of the USSR now in effect.

RESTRICTED

III. NEW ISSUE OF BARTHOLOMEW'S "MIDDLE AND NEAR EAST"

Middle and Near East; 1:4,000,000; John Bartholomew and Son, Ltd., Edinburgh; 1951; CIA Map Library Call No. 61052.

The new edition of Bartholomew's popular reference map of southwestern Asia is now available. In many respects it is an improvement over the 1943 edition. Particularly noteworthy is the prominent indication of the publication date, a feature lamentably obscured or lacking in earlier Bartholomew maps.

Comparison of the 1951 map with the 1943 edition reveals the thoroughgoing nature of the revision. Changes in coastlines and in the extent and shape of marshes and sand areas are apparent. Although the contour interval remains unchanged, the configuration of the contours is considerably changed in several areas. The color system used in the layer tinting is generally the same, but the somewhat darker shade of brown used on the new map for the higher elevations produces a more effective result. A clearer symbol for sand deserts is also used on the 1951 issue.

Numerous changes in cultural features appear on the new edition. The alignment of international boundaries has been revised, particularly in the Arabian Peninsula and Palestine. Some place names have been changed to conform to more acceptable spellings, although they do not necessarily agree with the rulings of the Permanent Committee on Geographic Names. Several new names have been added, notably in areas of petroleum development.

RESTRICTED

RESTRICTED

A serious effort has been made to revise the transportation network. Some of the more important new oil pipeline construction is indicated, the road net has been revised, and several changes have been made in the railroad pattern. Although the net result of the changes in the transportation information has been an improvement, a number of errors are still discernible to analysts familiar with the area. In a few cases, changes have occurred since the map was compiled.

In view of the general excellence of the new map as a reference source and the wide use that it will receive among US Government agencies, it is appropriate to point out the more important inaccuracies or deficiencies in the 1951 edition.

Selected List of Specific Inaccuracies or Deficiencies

Arabian Peninsula

1. The Persian Gulf terminus of the Saudi Arabian Government Railroad is Dammam Pier, not Dhahran. This railroad has been completed into Riyadh since the map was prepared.

2. The oil pipeline from Burghan through Ahmadi to Mena al Ahmadi (Kuwait) is not shown.

3. The trans-Qatar oil pipeline from Dukhan to Umm Said is not indicated. The latter location, an important tanker-loading port, is not identified.

4. The pipeline network in the Abqaiq-Bahrein-Ras Tanura area is more incomplete than the limitations of the small scale would necessitate.

RESTRICTED

RESTRICTED

5. The motorable route parallel to the trans-Arabian pipeline has been omitted.

Iran

1. The railway extending southeast from Qum is complete only as far as Kashan, not to Khalidabad.
2. The railroad from Sar-i-Bandar (between Ahwaz and Bandar Shahpur) to the important oil port of Bandar Ma'shur is not shown.
3. The narrow-gauge railroad from Dar-i-Khazineh to Masjid-i-Sulaiman has been dismantled.
4. The railroad line shown as running from Hosseinieh (between Ahwaz and Khorramshahr) to Ma'qil (Iraq) has been abandoned.

Iraq

1. The meter-gauge railroad has been extended from Kirkuk to Erbil.
2. The meter-gauge railroad between Ba'Quba and Kut al Imara has been dismantled.
3. Railroad lines south of Shu'aiba (including the line to Umm Qasr) have been abandoned and partially dismantled.
4. The oil pipeline between Az Zubair and Al Faw is omitted.

Syria

1. The railroad line of 60-centimeter gauge shown northeast of Deraa between Ezraa and Soueida has been dismantled.

RESTRICTED

RESTRICTED

Egypt-Israel

1. The international boundary between Egypt and Israel should run to the Mediterranean Sea. Egypt does not claim the Gaza strip as a part of Egypt.

Turkey

1. The railroad from Mudanya to Bursa was abandoned in 1948 in favor of road transportation.

2. The railroad from Kars to Arpaçay does not exist.

Greece

1. The railroad shown as bypassing Alexandroupolis and leading into Férrai does not exist.

USSR

1. The railroad from Tedzhen to Sarakhs does not exist.

2. The railroad shown as extending northwest from Chardzhou toward Kungrad is not yet complete.

3. The railroads from Baku to Mashtaga and from Borzhomi to Akhaltsikhe are omitted.

4. Artik, the terminus of the branch railway extending south-east from Leninakan, is erroneously identified as Makhmudzhug.

RESTRICTED

IV. BRIEF NOTICES

A. ADMINISTRATIVE BOUNDARY MAPS OF THE SOVIET ZONE OF GERMANY

Recent radical changes in the boundaries of the Länder (states) in the Soviet Zone of Germany are presented on two new editions of the Schaffmann and Kluge map, Deutsche Demokratische Republik (German Democratic Republic), at 1:700,000, that are available at the CIA Map Library. These changes, which are described in Map Research Bulletin No. 26, August 1951, pp.15-18, are shown on the July 1950 edition of the map (Call No. 74265) and on the January 1951 edition (Call No. 74263). The 1951 edition is recommended because it shows the new railroad outer freight ring built by the Soviets to bypass the western zones of Berlin.

In addition, sheets of a set covering three separate Länder at 1:300,000, also by Schaffmann and Kluge, are available. The sheets for Land Sachsen are on file at the CIA Map Library, in two editions: Ausgabe A (Call No. 74279), and Ausgabe B (Call No. 74280). Internal administrative boundaries (Land, Landkreis, and Stadtkreis) are presented more clearly on Ausgabe B. Sheets for Thüringen and Mecklenburg are held by the Army Map Service (Call No. 4M 23-26-43641-300).

B. A MOTOR ROAD IN SOVIET CENTRAL ASIA

A new motor road between Kungrad (43°06'N - 58°54'E) and Tagalayashchi (47°18'N - 55°31'E) is shown on the 1950 Soviet map of the Kazakh SSR, Politiko-Administrativnaya Karta Kazakhskoy SSR, at

RESTRICTED

1:1,500,000 (CIA Map Library, Call No. 72561). The road is classified as a main motor transport road (glavnaya avtoguzhevaya doroga), although 1951 maps of the Soviet Union at 1:5,000,000 and 1:8,000,000 indicate that all except a short segment of secondary road northwest of Kungrad is caravan route or trail. The presentation of the road on the Kazakh map is regarded as accurate, since other data on the map have been verified by reliable sources.

This road, which is the only major automobile route between the Caspian and Aral Seas, provides a motor link between Chardzhou and Aktyubinsk. From Kungrad, where it connects with the main automobile road and railroad to Chardzhou, the new road proceeds in a northwesterly direction for a distance of approximately 620 kilometers (384.4 miles), through the Ust'-Urt Plateau and the Sam Desert, to Tagalayashchi in the Emba Valley. From Tagalayashchi a trail continues to Alshinskay, a distance of approximately 44 kilometers (27.2 miles), where it joins the main automobile road which runs via Zharkamys and Uil to Aktyubinsk.

The new road follows the general direction of an unverified railroad line under construction or projected, between Kungrad and Aleksandrov Gay, which is shown on the 1948 British map, USSR and Adjacent Areas, at 1:8,000,000 (AMS Map No. 5104).

C. A NEW VOLUME ON SURVEYING AND MAPPING IN CEYLON

A volume entitled Land, Maps and Surveys that reviews in 131 pages the "evidence of land surveys as practised in Ceylon from

RESTRICTED

RESTRICTED

earliest known periods and the story of the Ceylon Survey Department from 1800 to 1950" is now available at the CIA Map Library. The book was written by R. L. Brohier and published by the Ceylon Government Press, Colombo, in 1950. Although several maps are included, only one is noteworthy -- a map showing present provincial boundaries and indicating the dates when sections of each boundary were surveyed.

The book describes clearly and concisely the history of the measuring and mapping of property lines, administrative boundaries, and topography in Ceylon. A particularly useful summary of the organization, techniques, and achievements of the Ceylon Survey Department is contained in the final chapter. At first this agency concentrated on the surveying of property lines and administrative boundaries. No significant topographic surveys were undertaken until 1879. In 1908, work was begun on the contoured topographic series at 1:63,360, based on plane-table surveys. Complete planimetric coverage for the island at this scale was available by 1917, and by 1924 contour surveys at the same scale had been completed. Since 1925, when the final sheets of the contoured series were published, the Survey has undertaken no new major surveys but has made many revisions to the sheets and has completed a number of special surveys for various purposes.

D. MAPS OF THE TERRITOIRES OF THE BELGIAN CONGO

A series of 121 sheets, each covering one of the territoires in the Belgian Congo, has been received. The sheets are ozalid

RESTRICTED

RESTRICTED

reproductions at a scale of 1:200,000 of sheets published by the Institut Géographique du Congo Belge during the period from 1947 to 1951, the majority in 1949. They are cataloged in groups, by province, and have the following call numbers: Kivu, 73723; Equateur, 73724; Orientale, 73725; Léopoldville, 73757; Katanga, 73758; and Kasai, 73759.

On each sheet the compilation sources used are listed, the chief being itineraries, reports to the territorial administrators, and information from surveys made by mining, railroad, and other development agencies and by cartographic and boundary missions.

The series furnishes a vast amount of information, as indicated by the 81 separate items included on an accompanying legend sheet. Among the more significant features are boundaries; political centers; villages; agricultural settlements; religious missions; medical facilities; mining, industrial, and trade centers; drainage; geodetic points of the first, second, and third order; transportation and communication facilities; and airfields.

The quality of the sheets varies considerably. For areas of economic exploitation in which mapping has been systematic, the sheets appear to be reliable. In the mining areas of the provinces of Katanga, Kivu, Kasai, and Orientale, mining companies have made topographic surveys. Surveys have also been made along most of the boundary sections that do not follow rivers or lakes. These surveys cover the boundaries of the Belgian Congo with Angola and with all

British territories except the Anglo-Egyptian Sudan. In the interior and in the northern part of the Belgian Congo very little accurate surveying has been done.

In spite of the poor quality of paper, blurred printing on some sheets, lack of a sheet legend and incomplete information for some areas, the map supplies interesting and valuable geographic information on the internal administrative structure as well as the economic development of the country.
